

# PRODUCT BULLETIN

## *TeleDirectory Web Server*

**Number:** P19.05

Access to up-to-date directory information is an important requirement in today’s corporate environment. Employee information such as telephone number, location, pager ID, e-mail address, etc. are constantly changing. Having this information readily available is an essential element in providing effective corporate-wide communications. And, as we all know, a published directory with this information is a necessity, but it is often out-of-date as soon as it has been printed.

Conveyant Systems’ TeleDirectory Web Server was designed to improve corporate communications by providing users on the corporate network with the ability to access up-to-date enterprise directory information from their desktop PC. Standard Internet browsers, such as Microsoft Internet Explorer 6.0 or above, may be used to access this information. In addition, the Web Server is integrated with Conveyant’s TeleDirectory application, making directory updates quick and easy.

*On-line directory search with access to detailed employee information*

The Web Server provides users with fast search capability of the corporate database, and is an excellent alternative to expensive, out-of-date paper directories. In addition, key features of the TeleDirectory product, including detail information pages, multiple user-customizable directories and index and sequential directory formats, may be accessed with the Web Server.

The Web Server’s directory lookup and e-mail links provide for quick and efficient employee communications, and reduce the dial “0” calls to your company operator. The Web Server allows simultaneous access to corporate users and is offered with an unlimited site license. Only the provisions of your network limit access to the Web Server.

## **KEY FEATURES AND BENEFITS**

- On-line directory lookup using standard Internet browsers
- Integrated with TeleDirectory application
- Links to e-mail and employee detail information
- Security controlled by TeleDirectory administrator including restricting or allowing access to directories, fields and entries
- Users can send updated information to TeleDirectory administrators
- Improved corporate-wide communications
- Access to up-to-date enterprise directory information
- Easy-to-use with intuitive interface

## **WEB SERVER REQUIREMENTS**
