Conveyant Notification Solutions

Providing best in class solutions for your notification needs

Time Sensitive information impacts your bottom line. You need to automate communications whenever possible to increase efficiency of your staff. You need the reliability of an event notification application already proven in the most demanding environments. Conveyant Systems has a proven track record in providing powerful and reliable system solutions for your needs. The strategic partnership between Attention Software and Conveyant Systems provides customers with enhanced notification solutions and a wide range of industry leading features.

The **Attention!® Notification System (NS)** delivers real-time alerting of significant enterprise events via wireless notification technologies such as pagers, cell phones, electronic mail, and other custom notification techniques. Our Notification System's fault-tolerant design, and comprehensive escalation strategy, guarantee the appropriate individuals will be notified in a timely manner.

Attention! NS addresses every aspect of enterprise alerting, with an attention to detail that is unsurpassed in the industry. This mature software system has evolved to meet the requirements of even the most demanding organization.

FEATURES

One and Two-Way Paging: Send text messages to mobile employees with delivery confirmation.

Calendars and Availability Scheduling: Users can schedule their availability, and notification preference, at 15-minute intervals for up to 5 years in the future.

Comprehensive Reporting: Allows users to customize the audit trails of the notification process.

Text-to-Speech: Provides automatic translation of event messages to human sounding speech.

Telephone Response Interface: Initiate notification to others, leave voicemail messages, or start corrective action routines from the keypad of your touch-tone phone.

BENEFITS

Unlimited Escalation: User-defined notification escalation chains continue to notify until someone responds.

Application Integration: Interfaces with many of the best-selling third party applications.

Compatibility: Interfaces with in-building wireless systems; local, regional and national wireless service providers.

Ease of Use: Easy to install, configure and operate.

Redundancy: Available in redundant configurations providing the fault-tolerance necessary in demanding environments.

Competitively Priced: The Attention Notification System offers advanced capabilities at price competitive levels.

Attention! NS offers intuitive installation, management and use with the performance of a premium software package so that your company experiences improved communications, productivity gains and cost efficiencies immediately.

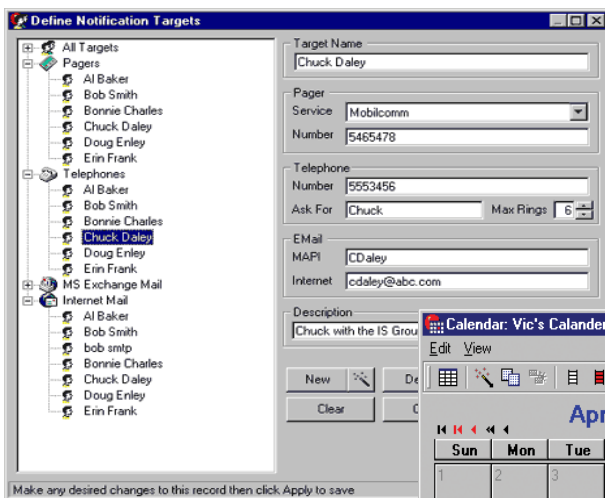

Notification Technologies

Attention! NS Targets provide a central repository of remote notification parameters for all system users. Supported technologies include numeric and alpha-numeric pagers, telephone, SMS devices, MAPI mail and SMTP (Internet) mail.

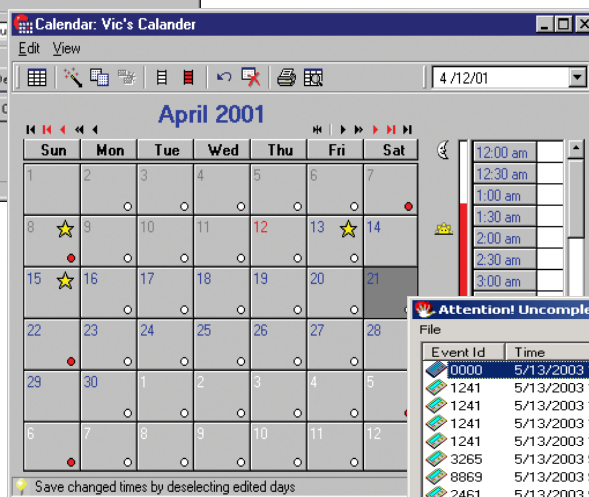

Supporting the Standards

Our products are on the forefront of notification technologies, and are designed to scale quickly as new standards are developed in the wireless messaging industry. We are dedicated to supporting the protocols and devices used throughout the world to communicate real-time information to the people in your organization. Whether its TAP, UCP, SNPP, SMPP, or SMS wireless, **Attention! NS** provides you with the one notification solution that covers all the bases.

The **Action Editor** provides an easy-to-use interface to define notification escalation chains. Notification escalates through the chain until the desired individual responds.

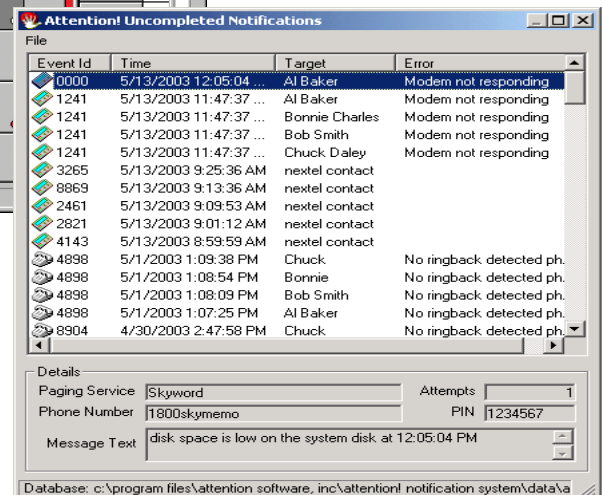

Calendar and scheduling capability allows users to define notification preferences based on date and time in 15 minute intervals up to 5 years in advance.

Comprehensive reporting provides administrators with detailed information on every aspect of the notification process. Historical data is available which can assist in capacity and disaster planning.
