

Sentry™ Emergency Response Management Gatekeeper

Knowing the location of your soft phone users is critical in a 911 event.

Sentry™ Gatekeeper
solves that for you.

Innovative, Reliable, Actionable Information

- Gatekeeper detects when the client is off the corporate network, prompting the user to confirm their current location. Gatekeeper then updates the Sentry™ server to properly provision the 911 database.
- Stores frequently used addresses for easy selection and automatically selects the most likely location. Adding new locations is a snap with just a few simple keystrokes.
- Sentry will always have your current address so help can find you in an emergency, and provides for detailed internal notification when you dial 911.
