Sentry™ E911 Solutions

When 911 calls are placed—every second counts. Your organization's ability to provide assistance to the first responders is a crucial component in keeping employees, customers, patients, guests, and others safe. Among some of the immediate responsibilities include identifying the caller's location and notifying on-site personnel that a 911 call has been made.

Sounds easy enough—but in many instances it's not. In some cases, the information supplied to the emergency dispatcher is inaccurate—whether due to the caller's inability to provide their location, or due to inaccurate information provisioned in the PS-ALI database. In addition, on-site security personnel and others that may be able to provide assistance may not be aware that a 911 call has been placed. This will result in confusion and delays in responding to the emergency.

Upon device registration, the **Sentry E911 Solution** provides the PBX/Call Server with relevant location information that assists in protecting users during an emergency call. As soon as a 911 call is placed, Sentry utilizes that information to pinpoint the callers location. Additionally, the Sentry Beacon provides on-site notification of the 911 call, via screen-pop or e-mail, to security personnel and others allowing for an immediate and accurate local response while waiting for the arrival of first responders.

MAXIMIZE YOUR 9-1-1 CALL MANAGEMENT WITH SENTRY E911 SOLUTIONS

- Designed to work with your eZuce openUC Call Server platform.
- Notifies on-site personnel when an emergency call is placed with filters and escalation.
- VoIP location discovery with database updates.
- Increases security for employees, guests, students, patients and others.
- Information is logged and viewable using a Web interface.
- May be integrated with Conveyant's TeleDirectory™ Console for Private Emergency Answering Positions.
